Quarterly Market Review

Second Quarter 2021

Quarterly Market Review

Second Quarter 2021

This report features world capital market performance and a timeline of events for the past quarter. It begins with a global overview, then features the returns of stock and bond asset classes in the US and international markets.

The report also illustrates the impact of globally diversified portfolios and features a quarterly topic.

Inflation: An Exchange Between
Eugene Fama and David Booth

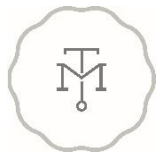

The New Expansion

We have officially made it 12 months past the shortest recession in US history. The National Bureau of Economic Research's Business Cycle Dating Committee declared the recession to begin in February 2020, ending in April 2020. A recession is typically defined by two consecutive quarters of declining Gross Domestic Product (GDP); however, the committee declared this time period an official recession when US economic output declined 31.4% annualized pace in Q2 2020, and the country lost a whopping 20 million-plus jobs. The Covid-19 related recession ended an economic boon that started in June of 2009 and lasted 128 months, the longest US economic expansion on record. If life is true to form, and all records are meant to be broken, we should find ourselves repeating a similar dance to a slightly different tune in the future. When the time comes to dance, you will be reminded to put on the best shoes you have for dancing... a buy and hold, globally diversified portfolio that adheres to the long-term goals of your financial plan.

Currently, US markets as proxied by the S&P 500 and Dow Industrial Average, are set to take on the new week at all-time highs reporting double digit increases in price year-to-date, 17.46% and 14.56% respectively. You may not suspect such positive news if your psyche allows you to focus on the headline reports of doomsayers and prognosticators predicting the worst is yet to come. However, the global economy is making strides back to normalcy as supply chains continue to stabilize and businesses begin to renormalize and adapt to the current environment. As in the first half of 2021, there has been a lot of activity at Timonier and industry wide that begs your attention.

President Biden's proposed tax reform remains front and center of industry news and headlines. Inflationary fears have produced a cast of actors warning investors of the pending doom (and what to do with your assets) during the next market correction. Fear and gossip still capture attention and make for great "stories" that will often require the investor's call to action once hooked. The global recovery continues, albeit with slower growth than experienced in the first quarter of 2021. We have also seen increased volatility in the global markets over the past few weeks as fears of the Delta variant's spread and new guidance is issued to protect yourself and the public. We at Timonier are sending all the professionals in healthcare and those personally affected continued positive thoughts and prayers as we navigate the new strain.

Taxes

A great rule of thumb, as it pertains to attempting to follow proposed federal tax legislation as it makes its way through congress: Don't. You are much better served by devoting brain cells and energy to your family, valued relationships, your career, and passions than absorbing information that may or may not turn out to be true. Often, the version of legislation that survives the tax committee's butcher block can be a much different picture than originally painted. Your trusted fiduciaries will continue to monitor this information for you, digest it for clarity and understanding, and stand ready to respond when and if appropriate to do so based on quality information.

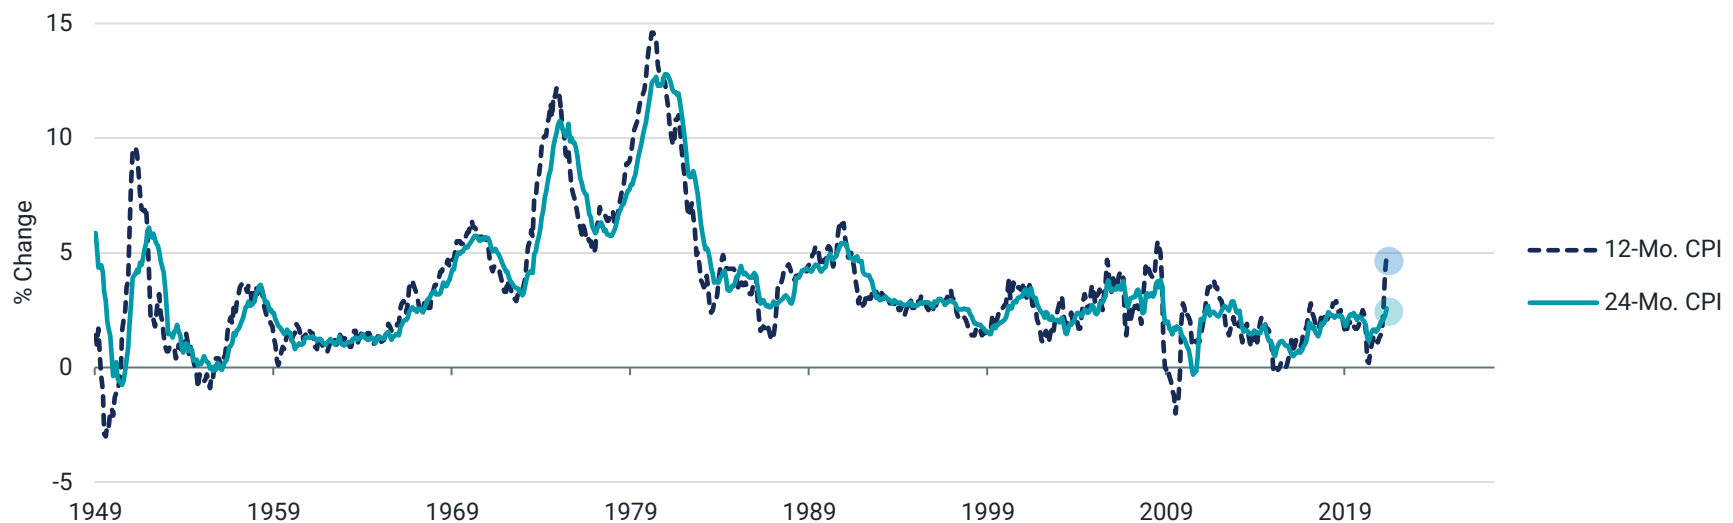

Inflation

The consumer price index is up 5.4% for the year ending June 2021, reflecting the largest annual increase since 2008. However, like most charts, shifting your observation window can reflect materially different information. Using February 2020 as the start date, the consumer price index shows a 3.5% annualized rate. With inflation awareness heightened, it is natural to jump in on the conversation and speculation, but it is nothing new for investment markets. Inflation defined is a measure of the rate of rising prices of goods and services in an economy. However, lots of factors go into the determining of this calculation. Inflation can occur when prices rise due to increases in production costs, such as raw materials and wages. A surge in demand for products and services can also cause inflation as consumers are willing to pay more for the product. Some of this inflation does in fact represent imbalances in the supply chain, but there is also monetary policy involved. Many Americans find themselves financially better off than before the pandemic began as US wealth hits a record \$136.9 trillion in the first half of 2021 due to government intervention and business stimulus relief efforts. Some companies are positioned to reap the rewards of these imbalances and can charge more for their product or service, and virtually no product or service is invulnerable to the effects of inflation.

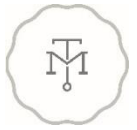

Take a step back from the 12-month approach and consider the fact that since the market trough the US has seen tremendous economic growth and significant decreases in unemployment. Market imbalances and pent-up demand for goods and services has triggered this higher-than-expected “transitory” inflation that many economists believe will be brief. When compared to historical data, 5.4% may seem significant, but it falls within the “norm” of what we have experienced in the past. Much to every investors dismay, we do not have a crystal ball and we will have to wait to see who is right when looking back on this moment in time.

Exhibit 1: Zooming Out Puts the Latest Inflation Numbers in Perspective

Data from 1/15/1949 – 5/15/2021. Source: Bureau of Labor Statistics, Avantis Investors.

If the thought of inflation creates concerns of eroding purchasing power in the future, rest assured your best weapon against this “evil” is to remain invested which has proven to help outpace inflation over the long term. For more empirical evidence and insights about asset class returns during inflationary periods [CLICK HERE](#) for a great article from the academic minds at Dimensional Fund Advisors.

Final Comments

No matter what the concern may be, if it is important to you, it is valid to your team of advisors. If you have recently experienced a major life event (or not) and we have not had the opportunity to visit this year, we would welcome the opportunity to do so. In closing, I want to thank you for allowing our team to serve as your investment fiduciaries, without you there is no us. We are thankful to be a part of your journey and sincerely appreciate your continued trust in Timonier. May your following days be enjoyable, and your energy used to create good. We look forward to our next exchange in or outside of the office.

"To be a star, you must shine your own light, follow your own path, and don't worry about darkness, for that is when the stars shine brightest."

Growth of Wealth: The Relationship between Risk and Return

1. STDEV (standard deviation) is a measure of the variation or dispersion of a set of data points. Standard deviations are often used to quantify the historical return volatility of a security or portfolio. Diversification does not eliminate the risk of market loss. **Past performance is not a guarantee of future results. Indices are not available for direct investment. Index performance does not reflect expenses associated with the management of an actual portfolio.** Asset allocations and the hypothetical index portfolio returns are for illustrative purposes only and do not represent actual performance. Global Stocks represented by MSCI All Country World Index (gross div.) and Treasury Bills represented by US One-Month Treasury Bills. Globally diversified allocations rebalanced monthly, no withdrawals. Data © MSCI 2021, all rights reserved. Inflation: An Exchange Between Eugene Fama and David Booth

Second Quarter 2021

David Booth, Executive Chairman and Founder

Eugene Fama, PhD, Nobel laureate, Director, and Consultant

With the economy starting to recover from the COVID-19 pandemic and investor concerns turning increasingly toward inflation, Dimensional Founder David Booth talked with Nobel laureate Eugene Fama about inflation and how investors should think about it in their portfolios. Excerpts from their conversation have been edited for clarity.

ON PREDICTING INFLATION

David Booth: Gene, you are a founding Director of Dimensional and have been involved in our research and corporate governance for more than 40 years. People may not know that you've also done a lot of research on inflation and interest rates.

We always tell people, "We don't try to forecast. We try to be prepared for various outcomes." Inflation is one of those things you want to be prepared for. There's a pickup in inflation risk that wasn't there, say, 10 years ago. Does that cause you to worry?

Eugene Fama: Historically what's happened is, when there's a spike, the spike persists for a long time. Inflation tends to be highly persistent once you get it. Once it goes down, it tends to be highly persistent on the downside. You've got to be prepared for that. Predicting next month's inflation may not be very hard because this month's inflation can be a pretty good predictor of next month's inflation, or next quarter's inflation, or even the next six months' inflation. Persistence is a characteristic of inflation.

We haven't been in a period of high inflation, or even moderate inflation, for at least 10 years, so I'm not particularly concerned that inflation will be high soon.

ON HOW INVESTORS SHOULD THINK ABOUT INFLATION AND THEIR FINANCIAL GOALS

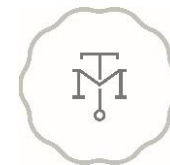

Booth: Conditions change, so is there anything about the current environment and the risk of inflation heating up that would cause you to change your portfolio?

Fama: I don't think anybody predicts the market very well. Market timing is risky in the sense that you've always emphasized: You may be out of the stock market at precisely the time when it generates its biggest returns. The nature of the stock market is you get a lot of the return in very short periods of time. So, you basically don't want to be out for short periods of time, where you may actually be missing a good part of the return.

I think you take a long-term perspective. You decide how much risk you're willing to take, and then you choose a mix of bonds, stocks, Treasury Inflation-Protected Securities, and whatever else satisfies your long-term goals. And you forget about the short term. Maybe you rebalance occasionally because the weights can get out of whack, but you don't try to time the market in any way, shape, or form. It's a losing proposition.

Booth: As you get to the point in life where you actually need to use your portfolio, does that change the kinds of allocations you'd want?

Fama: The classic answer to that was, yes, you'd shift more toward short-term hedges, short-term bonds. Once you had enough accumulated wealth that you thought you could make it through retirement, you'd want to hedge away any uncertainty that might disturb that. That's a matter of taste and your willingness to take risk and your plans for the people you will leave behind, like your

Inflation: An Exchange Between Eugene Fama and David Booth

(continued from page 18)

charities or your kids. All of that will influence how you make that decision. But the typical person who thinks they'll spend all their money before they die probably wants to move into less risky stuff as they approach retirement.

Booth: The notion of risk is pretty fuzzy. For example, if I decide that I want to hold Treasury bills or CDs when I retire, and you did that 40 years ago, when we started the firm, and you've got that 15% coupon, that's pretty exciting. With \$1 million at 15%, you're getting \$150,000 a year. Today you might get less than 1%.

Fama: Right, but I remember when inflation was running at about 15%, so not much better off!

Booth: Those are different kinds of risks.

Fama: When you approach retirement, you're basically concerned about what your real wealth will look like over the period of your retirement, and you have some incentives to hedge against that. You face the possibility, for example, that if you invest in stocks, you have a higher expected return, but you may lose 30% in a year and that might be devastating for your long-term consumption.

Booth: I think part of planning is not only your investment portfolio, but what to do if you experience unexpected events of any kind. We're kind of back to where we start our usual conversation: "Control what you can control." You can't control markets. What you can do is prepare yourself for what you'll do in case bad events happen. Inflation is just one of many risk factors long-term investors need to be prepared for.
