Quarterly Topic: AI Is Everywhere, Including Your Portfolio

Closing 2025: Markets Trends, Fed Moves, & Investor Focus

From the Engine Room Q3 2025

Dear Valued Clients, family, and friends,

As the holiday season approaches and we prepare to close the chapter on 2025, we want to express our heartfelt gratitude to the families we have the privilege of serving. Thank you for trusting us to be part of your investment journeys—it's an honor to walk alongside you as you build your financial future. Before we recap the recent quarter, we want to reaffirm our commitment to ongoing conversations and the thoughtful coordination of your tax and financial plans. We look forward to ending the year on a strong, positive note together.

The third quarter brought encouraging developments across both domestic and global stock and bond markets. After international and emerging markets buoyed portfolios in the first half of the year, U.S. equities surged ahead, helping to close the performance gap. The S&P 500 rose 8.1% in Q3 and has now posted gains in seven of the last eight quarters.

Despite this strength, and after recording 36 new all-time closing highs this year, concerns about market overvaluation persist, prompting some analysts to draw parallels to past market bubbles. Investors and analysts often use the price-to-earnings (P/E) ratio to assess whether companies or broader indexes like the S&P 500

are fairly valued. According to JP Morgan's Guide to the Markets, the S&P 500's forward-looking P/E ratio stands at 22.9x, above its 40-year historical median of 18.2x. While this may suggest elevated valuations, it can also reflect expectations for stronger future growth, a potentially positive signal depending on the interpretation.

Still, the quarter was not without its challenges. The ongoing government shutdown (now the longest in history) has created hardships for federal employees and travel disruptions due to shortages of TSA staff and air traffic controllers. Historically, however, shutdowns have had limited long-term impact on financial markets, as government spending is typically delayed rather than lost. After the previous record-setting shutdown in 2018–2019, the S&P 500 went on to gain 31.5% in 2019. Of course, past performance doesn't guarantee future results, but it serves as a reminder that markets often look beyond short-term disruptions.

Labor market headlines have also stirred uncertainty, with mass layoffs making news. Yet unemployment remains relatively low at 4.5%, below its historical average of 5.9% dating back to 1960. Economic data continues to tell a more positive story, if you know where to look.

Closing 2025: Markets Trends, Fed Moves, & Investor Focus

From the Engine Room Q3 2025

Despite the shutdown, inflation data was released, offering guidance for the FOMC's late October rate decision. The Fed reduced the federal funds rate by 0.25%, setting a new target range of 3.75%–4%. Both traditional CPI and Core CPI showed a year-over-year increase of 3%, still above the Fed's 2% target, but below the current Fed Funds interest rate. Markets softened this week after the Fed signaled that a December rate cut is not guaranteed. However, the Fed also announced it will end its quantitative tightening program on December 1, shifting toward a more accommodative monetary policy in 2026. This concludes a multi-year effort to shrink its balance sheet, a move that has historically supported equity markets. Increased liquidity and lower interest rates tend to lift asset prices broadly, though they may also reignite inflationary pressures.

It has certainly been a dynamic year. As we head into the final stretch, it's clear that markets continue to be shaped by a mix of optimism, volatility, and evolving policy decisions. In times like these, the importance of sound investor behavior cannot be overstated. Staying focused on long-term goals, maintaining diversified portfolios, and resisting the urge to react to short-term headlines are the hallmarks of successful investing. While economic data and market performance offer reasons for cautious optimism, it's our shared commitment to thoughtful planning and steady decision-making that will

continue to drive meaningful progress. We're grateful to be part of your journey and look forward to navigating the road ahead together.

Wishing everyone a joyful holiday season filled with warmth, peace, and safe travels wherever you go!

Global Fixed Income

Yield curves, 3rd Quarter 2025

Except for the US and Canada, interest rates increased in the global developed markets for the quarter.

In Canada, short- to intermediate-term interest rates decreased, and long-term interest rates increased. The short-term maturity segment of the yield curve was generally flat but steepened in the three- to five-year maturity segment in Canada, Germany, UK and Australia.

Realized term premiums were mixed across global developed markets. Realized term premiums were positive in the US and Canada, as longer-term bonds generally outperformed shorter-term bonds during the quarter. However, realized term premiums were negative in the UK and Germany, as longer-term bonds generally underperformed shorter-term bonds during the quarter.

Changes in Yield (bps) Since 06/30/2025

	1Y	5Y	10Y	20Y	30Y

AI Is Everywhere, Including Your Portfolio

Third Quarter 2025

Wes Crill, PhD, Senior Client Solutions Director and Vice President, Dimensional Fund Advisors

One of the most common investor questions regarding the rise of artificial intelligence (AI) is “How do I take advantage of it in my portfolio?” The good news for investors is diversified equity portfolios already have exposure, mainly because AI tools touch nearly every type of business these days.

Holdings of the five largest AI ETFs collectively span a sizable chunk of the market—42.5% of US stock market capitalization and 32.7% of global market cap. And it’s not just a few big companies like NVIDIA or Apple—in the US alone, 127 companies are included among these AI-focused strategies.

The pervasiveness of AI opportunities is evident when perusing the company names. The usual suspects from technology are well represented—all five hold NVIDIA—but less techy names like Caterpillar, Honeywell, and Thomson Reuters can be found within these ETFs. This exemplifies how AI is likely to touch virtually every business type, making it harder to predict the ultimate winners from the revolution. Broad diversification can help investors avoid missing out on these winners, wherever they show up.

PERCENT OF THE MARKET HELD BY THE TOP 5 AI ETFs

As of December 31, 2024

Holdings are subject to change.

AI Is Everywhere, Including Your Portfolio

(continued from page 17)

Past performance is no guarantee of future results.

Source: Dimensional, using Dimensional and Morningstar data. AI companies are represented by the holdings in the top five largest artificial intelligence (AI) ETFs based on assets under management as of December 31, 2024: AIQ, BOTZ, QTUM, ARKQ, and ROBT. Eligible universe includes US domiciled funds in the US Sector Equity and US Equity Morningstar US category groups. Artificial intelligence (AI) funds include those with one or more of the following terms in the fund name: "AI," "Quantum," "Intelligent Machines," "Autonomous," "Deep Learning," "Artificial Intelligence," "Machine Learning." Fund names including "AI Powered" are excluded from the analysis. Fund list may not be exhaustive of all funds that invest in AI-themed stocks. The sample excludes leveraged funds, funds of funds, and the US Fund Real Estate and US Fund Infrastructure US category groups. Global Equities is represented by the MSCI ACWI IMI Index. US Equities is represented by the Russell 3000 Index. MSCI data © MSCI 2025, all rights reserved.
